

Whisper Phone

Materials

90-degree 1" PVC pipe-fitting elbows (2 per phone)
1" PVC pipe (cut to 3" or 4" lengths, 1 per phone)
clear mailing tape (or decorative duct tape)

Instructions to make

Fit two PVC elbows on opposite ends of a straight length of PVC pipe so that the pipes and elbows resemble the handset of a telephone. Secure the elbows to the pipe with tape.

Speaking in a normal tone of voice, children will hear their own voices magnified when speaking into the handset of a "telephone" made of PVC pipe. Whisper the Bible Memory in the child's ear and have the child repeat them aloud into his whisper phone. As he hears himself speak, the child may correct many beginning or ending deletions he is making without even knowing it. Give each child his or her very own set of special listening ears with this simple and inexpensive device.
